To Whom It May Concern:

I am an Area Manager for the University of Pennsylvania in the Facilities Department for the school. I have been using Industrial Mechanical for the past five years during our summer turnaround process. The mechanics assigned to perform the work are professional and courteous in their profession. When given a project or just performing work from the prescribed task list, they approach this work in the most expedient manner. Their expertise in the mechanical field allows for the work to be done in an efficient manner at a good price without impacting quality. The project co-coordinator is always available with short notice to provide guidance and assistance in developing scope and pricing on a variety of work.

I would highly recommend Industrial Mechanical for any project work your organization may have.

Sincerely,

Kenneth Stewart  
Area Manager
